

## CS411 Weekly Report

### Team Bronze

**Performance Period:** February 12th - February 18th

#### 1. Summary of Group Accomplishments:

- Skeleton site set up
- Database and full test data set up with sql script.
- Communicated between the front end and back end with routers. Both ways.
- Example pantry page setup that displays product information from database.

#### 2. Individual Contributions/Accomplishments: (to be filled out by each individual)

- **Parker D.:** Fully prepped the database and successfully routed database query into web page.
- **Mark:** Worked on setting up ejs and js express routes for the basic website setup.
- **Jackie:** – Out on sick leave –
- **Parker M.:** Made the html/ejs templates to start adding features and link between pages
- **Shan:** Implemented a [Node.js](#) and Express backend that handles POST requests from an EJS form.
- **Josh:**

#### 3. Key Objectives for Coming Week (top level prototype development objectives)

- Make the website pages more presentable using bootstrap
- Expand on pantry and home feed pages to display more info.
- Begin the scary task of parsing recall data.
- *Might* look into having pantry or recall page be user dependent. (Looking for a page I found that made it look easy)

#### 4. Issues/Concerns: Examples below...

- Can't tell if we're behind, especially compared to the other teams.
- Having issues getting the whole team to work on stuff at the same time.
- Not using the clickup as much as we should. It's been a lot of testing so far. We'll be working to remedy this during our current sprint.

#### 5. Mentor Meeting Notes:

- Discussed project file structure to make it more in line with common practice.
- Discussed how to expand what node can do for us, including switching html files to ejs.
